This includes details of the current portfolio and excludes any arrears cases repurchased by the Seller prior to the end of the reporting period. There is no obligation on the Seller to repurchase other than is required by the transaction documents.

Arears are calculated in accordance with standard market practice in the UK. A mortgage is identified as being in arrears when, on any due date, the overdue amounts which were due on previous due dates equal, in the aggregate, one or more full monthly payments. In making an arrears determination, the administrator calculates as of the date of determination the difference between the sum of all monthly payments that were due and payable by a borrower on any due date up to that date of determination (less the aggregate amount of all authorised underpayments made by such borrower up to such date of determination) and the sum of all payments actually made by that borrower up to that date of determination. If the result arrived at by dividing that difference (if any) by the amount of the required monthly payment equals or exceeds 1 the loan is deemed to be in arrears. Arrears dassification is determined based on the number of full monthly payments that have been missed. A borrower that has missed payments that in the aggregate equal or exceeding 2 monthly payments (but for which the aggregate of missed payments is lest shar and 3 monthly payments) would be deveneen? - 3 monthly payments in arrears, and so on.

<sup>\*\*</sup>This asset percentage is the required level for a AAA rating from each Rating Agency, including a AAA rating on a Probability of Default (PD) only basis from Fitch.

A rating of AAA from each Rating Agency would also be achieved using a lower level of over-collateralisation (a higher asset percentage of 85.1).
