Glossary:

Arrears	Arrears are calculated in accordance with standard market practice in the UK. A mortgage is identified as being in arrears when, on any due date, the overdue amounts which were due on previous due dates equal, in the aggregate, one or more full monthly payments. In making an arrears determination, the servicer calculates as of the date of determination (less the aggregate amount of all authorised underpayments made by such borrower up to such date of determination) and the sum of all payments actually made by that borrower up to that date of determination (less the aggregate amount of all payments actually made by that borrower up to that date of determination (less the aggregate amount of the required current monthly payments equals or exceeds 1 the account is deemed to be in arrears. Arrears classification is determined based on the number of equivalent full current monthly payments that have been missed. A borrower that has missed payments that in the aggregate equal or exceeding 2 monthly payments (but for which the aggregate of missed payments is less than 3 monthly payments) would be classified as being 2 to <3 months in arrears, and so on. For the purpose of the Asset Coverage Test, an account is treated as being in default if it is 3 or more months in arrears.
Monthly Constant Pre-Payment Date (CPR)	Monthly CPR on any portfolio calculation date means the total unscheduled principal receipts received during the period of one month ending on that calculation date divided by the aggregate current balance of the loans comprised in the portfolio property as at the immediately preceding calculation date. Unscheduled Principal Repayments comprise payments from Lloyds Bank plc for the repurchase of loans from the portfolio, and capital repayments and redemptions other than those received at the expected term end date of the loan. Where there has been portfolio transfers within the month, CPR is calculated on a weighted average basis.

Where there has been portfolio transfers within the month, PPR is calculated on a weighted average basis. These are annualised using the formula: 1-(11-M)^12) where M is the monthly CPR or PPR expressed as a percentage. Please note that CPR, as defined in the programme documentation, corresponds with PPR within this Investor Report.
